

常规Feign的入口代理handler是这个类

<mark>commandlsScalar</mark>为false时,markOnCompleted会调用circuitBreaker.markSuccess()

...or HystrixObservableCommand construct a HystrixCommand calculate circuit health available in / Thread pool 床 no-Circuit-breaker ≥ no-.toObservable() .execute() .queue() .observe() or run() rejected? open? Then, choose one of the above methods to obtain the result(s) of the command. Note that they all ultimately depend on .toObservable() execution fails? yes; return cached response getFallback() or resumeWithFallback() Legend: invoke path -return pathfallback no; failed or not implementedtimeout? ************* successful? observable: items emitted completion Hystrix[Observable]Command method ----no;-return resulting Observable -
